

Hunter's 350 Series Fan Controller is an easy-to-use digital fan controller with a user-friendly touchscreen interface which allows you to adjust your fan's speed and direction settings. Designed to be simple, there is no ancillary power needed as the 350 Series fan controller receives power from the VFD directly. And our Ethernet based network makes it easy to control up to 10 HVLS fans throughout your facility.

- Simple intuitive user interface to control up to 10 fans.
- BMS Integration with optional gateway.
- Fan fault notifications on screen.
- Quick install, no additional power necessary.
