

There when you need it most.
The Dock Lip Barrier.

Available on all hydraulic and air-powered dock levelers with capacities of 30,000 to 80,000 lb (13,607 to 36,287 kg), the Blue Giant Dock Lip Barrier (DLB) reduces the risk of accidental forklift roll-off.

Versatile Dock Safety Solution

- When the dock is in use, the lip remains flush with the deck (A), providing a smooth transition for material loading and unloading
- Featuring a lip that can be easily lowered to accommodate below level end-loading, it is easier to maximize trailer space without compromising protection

Engineered for Safety

- When stored, the DLB reaches 5" (127 mm) high, providing a solid steel barrier that stretches the width of the dock leveler
- Designed to withstand up to 15,000 lb (6804 kg) load impact at 5mph (8 km/h)
- 3/4" (19 mm)* solid, high-tensile one piece steel lip construction
- 1 3/8" (35 mm)* diameter lip hinge pin provides additional structural integrity for continued product performance and longevity
- High-visibility warning stripe decal on DLB increases operator awareness

Ask your authorized Blue Giant distributor about equipping your dock with one of our StrongArm™ Vehicle Restraints. Hydraulic, electric, and mechanical models are available to maximize the potential of your loading dock.

*On 80,000 lb (36,287 kg) capacity docks only. Measurements will vary by capacity.
