

Accessories

HORIZONTAL TUBE CADDY
This horizontal caddy slides onto the side rails of the platform and stores 4' and 8' fluorescent tubes. The dual level tray keeps old and new tubes separated.

VERTICAL TUBE CADDY
This version of the tube caddy attaches to the side of the platform and holds a box of 4' or 8' fluorescent tubes. It conserves valuable platform space for tool or supply storage.

OVERHEAD GUARD
An attachable overhead guard can be used to help protect workers from falling objects. The overall height of the guard is 80" from the platform deck to the top of the guard.

OPTIONAL CASTERS
These easy-roll 4" casters bolt directly to the bottom of tine sleeves.

SLIDING TOOL TRAY
This handy work-shelf secures to the side rails of the platform. It keeps tools within reach without restricting platform space.

Cotterman®

Overhead Work Platforms for Forklift Trucks

Cotterman Co.

Division of Material Control, Inc.

WORK PLATFORMS—PRODUCTION BOOSTERS FOR FORKLIFT TRUCKS.

Boost the efficiency and versatility of your forklift with the Overhead Work Platforms from Cotterman. Now the leading manufacturer of commercial and industrial ladders takes you to new heights in quick access to overhead maintenance jobs, construction and repairs, stock selection or just simple light bulb replacement. Cotterman Overhead Work Platforms comply with ANSI Standard B56.1-1988: Specifications for Platforms Used to Elevate Personnel.

Secured to almost any forklift they convert it to a portable maintenance lift which can be moved readily from job to job. When the work is complete, the platform is removed and the lift truck is available for other service. There is no need to make the investment in a self-powered lift and have it sit idle.

So, if you are looking for an economical platform for overhead work—go with the leader. Step up to quality—step up to Cotterman.

Features

Cotterman Workmaster®

Workmaster's durable steel construction helps it to withstand the day to day demands of an industrial environment. From top to bottom it's a versatile and time saving alternative to industrial ladders and scaffolding. For many maintenance and servicing functions it gets a technician to the job faster. A variety of platform sizes to choose from give plenty of working room, as well as extra space for tools and supplies. Provided in a standard gray powder coat finish, other color choices are available.

STOCKING AND RETRIEVAL

SERVICING AND MAINTENANCE

Stockmaster®

This companion to the overhead work platform will aid in the selection and inventorying of stock. It too fastens to a standard lift truck and negotiates narrow aisles. Stockmaster® gets the stock handler and pallet to overhead shelves for loading and unloading and, it shares the same durable construction features as the standard work platform.

The Stockmaster® is now equipped with a 6' swivel tail protection lanyard mounted overhead to an 84" tall back guard as described in ANSI Standard B56.1. A full body harness for personnel can be purchased separately. The 20"Dx30"W platform with a 4" toeboard gives the attendant room to stand with enough stacking space to handle a 42" deep pallet.

SM-301 STOCKMASTER MOUNTED ON STANDARD LIFT TRUCK FOR STOCK PICKING
