

MEC

Vintage Series M150 Fixed Inflatable Dock Seal

Energy Savings

Designed to suit 8' wide x 8' high openings. Reduces pressure against the building wall unlike conventional pads while creating a tight energy saving seal against the back of the truck. Inflates when truck is backed up, deflates before truck leaves.

Tight Seal

A uniformed air bag construction with a unique internal baffle system creates a Flat faced design to help increasing contact area.

Conditioned Air

With a 95% sealing efficiency, this model is excellent in servicing a wide variety of trailers by keeping conditioned air in, while keeping the unwanted weather and elements out.

Waterproof

The airtight design of this model does an excellent job of minimizing water entering the loading dock area once the trailer has docked, keeping the loading area dry and safe for employees while loading and unloading trailers.

Specifications

- 24" yellow guide stripes for truck placement
- Higher wedged header design to help seal a variety of trailers
- Pressure treated wood framing to mount air bags to.
- Flat faced design creates larger contact area for truck placement
- 22 oz Hi-Tear Vinyl for air bags
- 115V continuous running motor and blower assembly inflates the air bag system protected by a galvanized hood.

Shield your investment by upgrading the high impact areas on your dock seal.
