Advanced Series M900 Rain Diverter

Weatherproof

Can be used as a stand alone or designed with existing units. Eliminate rain and harsh weather from the loading dock area. The design of this model does an excellent job of minimizing water entering the loading dock area once the trailer has docked, keeping the loading area dry and safe for employees while loading and unloading trailers.

Tight Seal

This unit consists of one raked pressure treated head frame covered with Translucent sheeting, one custom foam wiper blade, made up of dual density foam to give a tight seal against the top of the trailers. Maintenance free design with no mechanical parts to service.
