

- ▶ Two blue cree LED lights per unit
- ▶ Life expectancy is 50,000 hours
- ▶ Light available in multiple voltages ranging from 12V to 96V
- ▶ Heavy aluminum construction offers full protection from dirt and water
- ▶ Light mounts to back of vehicle
- ▶ Provides ample warning to pedestrians and other forklifts in the area
- ▶ Operating temperature -40° F to 150° F

TRUCK - E LIGHT

LIGHT & COMMUNICATION

TRUCK-E light shown wired into the lights and mounted on rear portion of the forklift's overhead guard.

The TRUCK-E light is an innovative blue forklift light that helps avoid forklift and pedestrian collisions by shining a bright blue warning beam on the ground behind the forklift. In the USA alone, there are thousands of forklift/pedestrian accidents each year, many of which can be avoided by the addition of a visual warning to the pedestrian that a forklift is backing in their direction.

Back up alarms can be effective, but with many audible distractions in a building, the addition of a visual warning can help further protect your employees. The TRUCK-E light is a simple and cost effective warning tool that works alongside of your current back up alarm.

The TRUCK-E light installs on the rear portion of the forklift's overhead guard and projects a focused beam of blue light onto the ground behind the forklift. This bright blue spot on the ground moves with the forklift alerting pedestrians to oncoming forklift traffic.

The TRUCK-E's heavy duty construction is designed for industrial applications. Its durable housing and LED light beam are made to withstand the day to day use and abuse associate with being attached to a forklift truck.

The bright focused beam provides ample warning to pedestrians and other forklifts in the area.
