

LED Bumper Guide Lights

Lighting & Communication

FEATURES

- Designed to help trucks back safely and accurately into the dock
- Low-power consumption LED lights
- Shock and vibration proof
- Easily retrofitted
- Brightest guide lights available (12 LEDs)
- LED power-on light informs the operator that the guide lights are illuminated
- High-strength ABS light housing
- Key on/off switch
- Safe, reliable, 12-volt operation
- Great for interior docks and 24-hour operations
- Design and manufactured in the USA

LED Bumper Guide Lights Lighting & Communication

The LED guide lights allow truck drivers to easily see the bumper location and center themselves at the docks even in low light conditions

The Allied Solutions LED guide light provides a clear definable target for the truck driver. Each guide light uses 6 bright yellow LED lights to define the outside edge of the dock bumpers allowing truck drivers to accurately position their trucks at the door.

The Allied Solutions LED guide light is controlled by a key style inside light switch with an LED powered indicator. This gives the user the ability to power up the lights and keep them on. The LED indicator light allows the operators on the inside of the building to easily recognize that the guide lights are activated.

The LED guide lights run off of low, 12 volt DC voltage transformed in the control box for safe reliable operation.

UNIT INCLUDES

- Two bright LED guide lights
- Key style control station with step down transformer (115 to 12 volt)
- Two mounting bracket bases
