

Pro-Seal Energy Saving Solutions

FEATURES

- Tightest retro-fit rear seal available
- Installs in just minutes with no need to crawl under the leveler or even open the overhead door
- All equipment and installation tools are included with each kit
- Professional install is not required
- Kit seals both hydraulic and mechanical units
- High-strength brush seal protects the rear hing area from air and bug infiltration
- Specially designed clips hold the rear brush in place keeping the seal tight and secure
- One size fits all - 6', 6'6", 7' wide levelers
- Design and manufactured in the USA

Pro-Seal

Energy Saving Solutions

The Pro-Seal offers the quickest and tightest seal available. It can be positioned in the rear of the leveler in under ten minutes. The kit includes all of the necessary tools and equipment to completely seal the rear of the dock leveler, the hardest area to completely seal due to the odd shape of the rear hinge area. The Pro-Seal is positioned on top of specially designed clips which quickly snap into place using the patented clip tool included. After the brush is pressed into the rear hinge area, the seal expands, closing off the gap in the rear of the leveler. The specially designed tubular brush seals along every surface completely seals the rear hinge area, protecting your facility from air and rodent infiltration. The Pro-Seal is designed to be installed by anyone without the need for special tools or adhesives.

When the brush is pressed into place it is supported by the metal clips. The brush expands sealing the void between the rear header and the hinge where air and rodents could enter.

KIT INCLUDES

- Seven hinge clips and two rear brushes
- Enough supplies to completely seal a 6', 6'6" or 7' dock leveler
- One easy to use install tool
- Installation instructions
