

- ▶ Stores wheel chock and chain off ground
- ▶ Works with any style wheel chock
- ▶ Powder coated safety yellow
- ▶ Designed to drain water
- ▶ Quickly mounts to foundation wall
- ▶ Prevents snowplow damage and removal of chock and chain
- ▶ Increases life of chock and chain
- ▶ Prevents theft

WHEEL CHOCK CRADLE

WHEEL CHOCKS AND CRADLES

The wheel chock cradle can be added to any dock foundation wall to hold and protect the chock and chain while not in use

The Allied Solution Wheel Chock Cradle prevents the damages and loss associated with leaving wheel chocks lying around the loading dock drive approach.

Conveniently store both the wheel chock and chain off of the drive protecting them from snowplows, sweepers and trucks that can pull them from the wall and displace them away from the dock.

The Wheel Chock Cradle allows for storage of the wheel chock and chain in a convenient, easy to find location. The cradle is designed to work with all wheel chock and lanyard styles. The unit can be mounted to the dock wall in under 10 minutes.
