

ROBINSON HELICOPTER WORKSTANDS

FOR ROTOR MAINTENANCE

Wildeck's Robinson helicopter stands provide aircraft maintenance professionals with access to rotors of Robinson R22, R44, and R66 models. Wildeck's maintenance stands roll into position on heavy-duty 5" casters, which disengage during use. Each stand is equipped with (2) folding tool trays at the working level to reduce trips up and down the ladder.

Highlights

- For Robinson R22, R44, and R66 models
- Minimal contact with the aircraft skids and body
- Designed with end user feedback
- Built to comply with OSHA standards

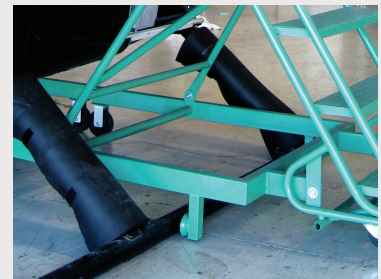

HOW IT WORKS

Each workstand comes equipped with Wildeck's Rolalift™ lifting mechanism, allowing maintenance professionals to position the platform.

Engaging the Rolalift™ lifting mechanism allows the ladder base to maneuver over the helicopter skid.

Horizontal rubber feet stop the platform at the helicopter skid. The Rolalift™ may then be disengaged, providing a stable workstand until project completion.

AIRCRAFT MAINTENANCE

ROBINSON HELICOPTER WORKSTANDS

STANDARD LADDER SPECIFICATIONS

- Standard Tread Width: 30"
- Working Platform Dimensions: 30" W x 20" H
- Capacity: 500 lbs.
