

## STAIRCASE TOWER

### Description

A staircase tower design requires the staircase run to be divided equally. If the staircase rise is higher than 12', a mid-landing is required in which case both runs must be the exact same length. Bracing of the staircase tower is required, refer to Cogan Engineer to determine the bracing design of your staircase tower project.

All self-closing safety gates are sealed in a durable, powder-coated safety yellow paint finish for maximum visibility.
